

AYESHA QAMAR

Computer Science Graduate

[linkedin.com/in/ayeshaqmr](https://www.linkedin.com/in/ayeshaqmr) | github.com/ayeshaqmr | ayeshaqmr.github.io

I'm a Computer Science graduate from FAST NUCES with an experience as a Software Engineer Intern at OGDC. I have gained exposure to Information Security, Deep Learning, Computer Vision, Data Science, Cloud Computing Fundamentals, and Internet of Things with an understanding of Software Engineering and Web Development fundamentals. I am passionate about building secure, user-centered applications and continuously growing through certifications and real-world problem solving.

EDUCATION

Bachelors of Science in Computer Science

FAST National University of Computer and Emerging Sciences

August 2022 – June 2026

EXPERIENCE

Software Development Intern

Oil & Gas Development Company (OGDC) – Systems Department

February 2026 – March 2026

- Worked in the Applications & Development area within the Systems Department.
- Contributed to OGDC's official website by updating and managing content.
- Used Oracle SQL Developer to handle and analyze large-scale datasets for their medical management system.
- Implemented basic AI-driven analysis and performed data visualization to derive insights from medical data.

CERTIFICATIONS

Google IT Support — Troubleshooting, Networking, System Administration, Cybersecurity Basics

Google Project Management — Agile, Scrum, SDLC

Google UX Design — User Research, Wireframing, Prototyping

Cisco Cybersecurity Certification — Security Fundamentals & Threat Awareness

LANGUAGES & TOOLS

Python · C/C++ · JS · SQL · Dart · Flutter · Tailwind · HTML · CSS · React.js · Next.js · Bootstrap · MongoDB · PostgreSQL · Supabase · Firebase · Oracle · MySQL Workbench · OpenCV · TensorFlow · PyTorch · Scikit-learn · Streamlit · Plotly Dash · Git/Github · Figma · Framer · Flutterflow · Canva · Cisco Packet Tracer · ThingsBoard · ThingSpeak · Blynk · Android Studio · Antigravity · Cursor · Claude

PROJECTS

Speak Dine — Final Year Project

- Developed an AI-assisted voice accessibility food delivery mobile application for visually impaired users.
- Implemented **Speech-to-Text (STT)**, **Text-to-Speech (TTS)**, and conversational AI using the **Gemini API**.
- Used **Flutter** for cross-platform development and **Firebase** for data storage and user authentication.

Water Level Monitoring System

- Designed a basic water-level monitoring system and integrated **Blynk Cloud** for remote monitoring and LED alerts.

Glaucoma Detection

- Worked with the Glaucoma Dataset (*EyePACS + AIOGS Light v2*) from Kaggle, which contains retinal fundus images.
- Performed data pre-processing, image normalization, and exploratory analysis to prepare the data for modeling.

Smart Trash Truck Routing System

- Developed an optimized routing system for waste collection using graph theory algorithms.
- Demonstrated strong problem-solving and algorithmic thinking by implementing pathfinding that significantly reduced fuel consumption and operational time.

Steganography Tool

- Created a utility to securely embed and extract hidden messages within digital media, demonstrating proficiency in data manipulation and security principles.

Digital Dictionary

- Implemented a Digital Dictionary in **C++** using a **Trie** data structure for efficient word retrieval and prefix-based searching.

Text Editor

- Built a functional text editor in **Python** that supports core document handling, file management, and basic text manipulation features.
